IN THE CLAIMS:

- 1. (Currently Amended) A composition of matter comprising an isolated polypeptide shown in consisting essentially of SEQ ID NO:1 and amino acid substitution variants thereof that specifically bind to an anti-Ehrlichia antibodyor variants thereof.
- 2. (Original) The composition of claim 1, further comprising a carrier.
- 3. (Currently Amended) An article of manufacture comprising packaging material and, contained within the packaging material, a polypeptide shown in consisting essentially of SEQ ID NO:1 or amino acid substitution variants thereof that specifically bind to an anti-Ehrlichia antibody.
- 4. (Currently Amended) The article of manufacture of claim 3 wherein the packaging material comprises a label that indicates that the polypeptide can be used for the identification of Ehrlichia Ehrlichia infection in a mammal.
- 5. (Currently Amended) The An article of manufacture of claim 4, comprising packaging material and, contained within the packaging material, a polypeptide consisting essentially of SEQ ID NO:1 or amino acid substitution variants thereof that specifically bind to an anti-Ehrlichia antibody, wherein the packaging material comprises a label that indicates that the polypeptide can be used for identification of Ehrlichia Ehrlichia infection in a mammal, and wherein the label indicates that the identification of an Ehrlichia Ehrlichia infection is done using a method of detecting presence of antibodies to Ehrlichia Ehrlichia comprising:
- (a) contacting a polypeptide shown in consisting essentially of SEQ ID NO:1, or amino acid substitution variants thereof that specifically bind to an anti-Ehrlichia antibody,

with a test sample suspected of comprising antibodies to Ehrlichia Ehrlichia, under conditions that allow polypeptide/antibody complexes to form;

- (b) detecting polypeptide/antibody complexes;
 wherein the detection of polypeptide/antibody complexes is an indication that an Ehrlichia
 Ehrlichia infection is present.
- 6. (Currently Amended) The An article of manufacture of claim 4, comprising packaging material and, contained within the packaging material, a polypeptide consisting essentially of SEQ ID NO:1 or amino acid substitution variants thereof that specifically bind to an anti-Ehrlichia antibody, wherein the packaging material comprises a label that indicates that the polypeptide can be used for identification of Ehrlichia Ehrlichia infection in a mammal, and wherein the Ehrlichia label indicates that the Ehrlichia infection is caused by Ehrlichia canis or Ehrlichia chaffeensis.
- 7. (New) A composition of matter comprising an isolated polypeptide that is 20 amino acids in length, which comprises SEQ ID NO:1 or amino acid substitution variants thereof, wherein the polypeptide specifically binds to an anti-*Ehrlichia* antibody.
- 8. (New) An article of manufacture comprising packaging material and, contained within the packaging material, an isolated polypeptide that is 20 amino acids in length, which comprises SEQ ID NO:1 or amino acid substitution variants thereof, wherein the polypeptide specifically binds to an anti-*Ehrlichia* antibody.
